MaoMi | Motion happens during acquisition

512 x 512 fluorescence scene / local PSFs / same frame midpoint / one shared absolute intensity scale

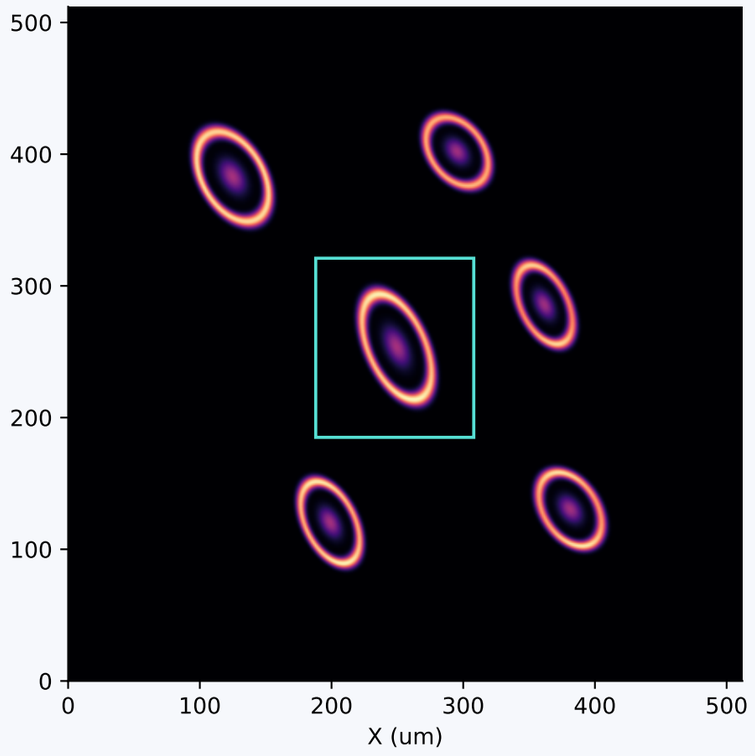

Simultaneous snapshot

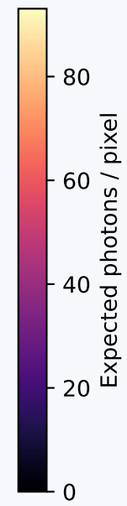

Raster | forward Y

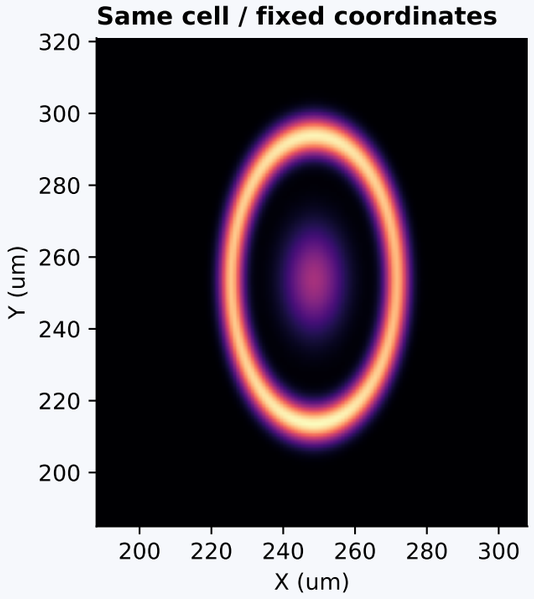

Raster | reverse Y

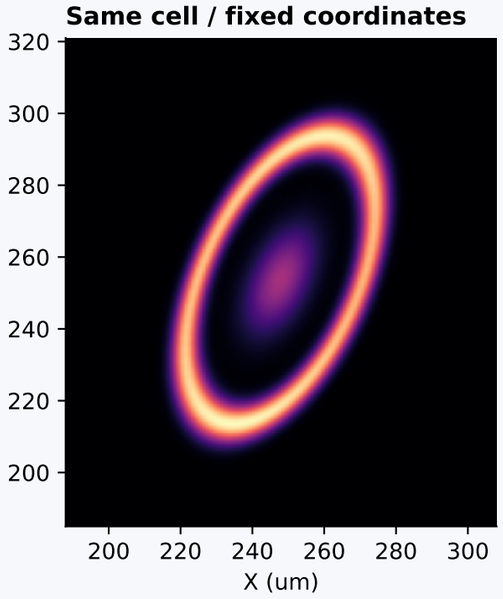

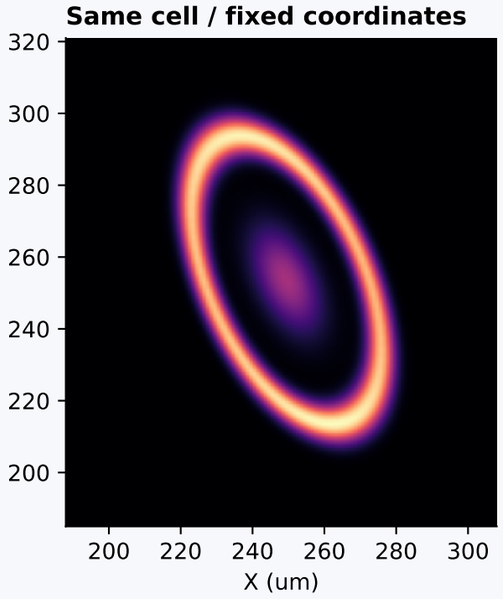

Same cell / fixed coordinates

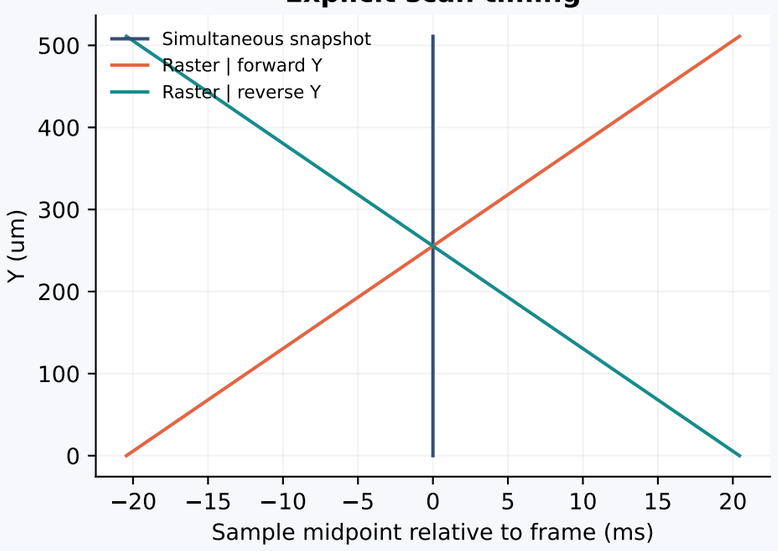

Same cell / fixed coordinates

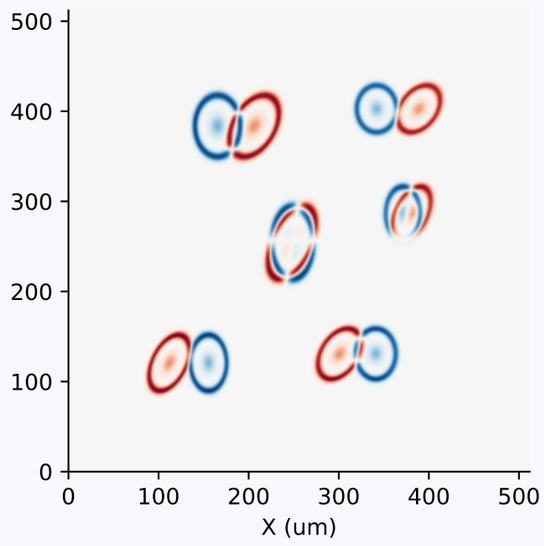

Same cell / fixed coordinates

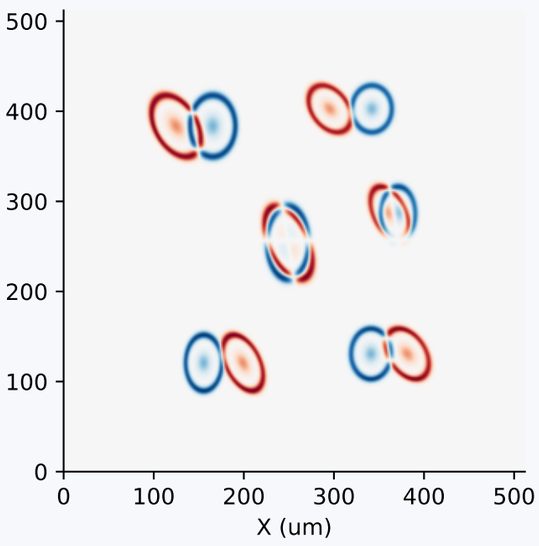

Explicit scan timing

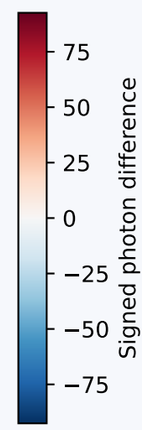

Raster - snapshot | field 122.8% L2
Fixed cell ROI 100.7% L2

Raster - snapshot | field 122.8% L2
Fixed cell ROI 100.7% L2

513 -> 1025 temporal samples: 0.1889% image L2 change. Rigid cells; scan-dependent shape arises before detector noise.
Synthetic 4 mm/s flow; 100 ns dwell, 80 us line period, 40.93 ms scan. Snapshot is a timing control, not a claim of a complete camera model.
